

There are two installer packages on this CD:

Sex Offenders.exe is the Windows operating system package; **Sex Offenders Installer OSX** is for Macintosh computers.

There are two user-accessible privilege sets available to you and your people.

The Admin privilege set allows the user to delete one, several or all records in the system. It also allows access to the Preferences area where program defaults are set and maintained, as well as to new user creation, where additional end users can be added to the system.

The PD Users privilege set allows record creation and editing, without allowing the general Delete ability (Except in certain controlled areas). We recommend setting most users at the PD Users level, limiting general access to certain supervisors or administrators.

The Admin account default for this system is user name **admin**, password **100**.

The first time you sign on with this account, the program will instruct you to change the password. DO NOT FORGET the password you assign yourself. Once logged on, you can go to the Main Menu by clicking the PolicePro logo at the bottom left of the Incident screen and assign yourself a new Admin account with your own log-on name, as well as assign additional user accounts to others in your department.
